

COVID-19 trajectory for Trinidad and Tobago

Briefing created by staff of the George Alleyne Chronic Disease Research Centre and the Public Health Group of The Faculty of Medical Sciences, Cave Hill Campus, The University of the West Indies. *Group Contacts: Ian Hambleton (analytics), Maddy Murphy (public health interventions), Kim Quimby (logistics planning), Natasha Sobers (surveillance).* For all our COVID-19 surveillance outputs, go to www.ianhambleton.com/covid19

Updated on: 6 Mar 2023 at 16:56:01

Aim of this briefing. We present the number of confirmed cases and deaths ¹ from COVID-19 infection in Trinidad and Tobago since the start of the outbreak, which we measure as the number of days since the first confirmed case. We report whether the case rate (per 100,000 people) is currently increasing or decreasing, and describe the current Trinidad and Tobago case load compared to the Trinidad and Tobago outbreak peak. For more on case rates, download the associated *country profile* For Trinidad and Tobago.

Confirmed Events	Total	New (7 days)	Case Rate
Cases	189,296	559	35% of peak
Deaths	4,347	8	Rate rising

These graphs show the absolute numbers of cases and deaths in Trinidad and Tobago since the start of the outbreak. They are the core information for assessing the extent of the COVID-19 burden over time.

Graph. New cases per week in Trinidad and Tobago as of 6 Mar 2023

Graph. New deaths per week in Trinidad and Tobago as of 6 Mar 2023
