

COVID-19 trajectory for Antigua and Barbuda

Briefing created by staff of the George Alleyne Chronic Disease Research Centre and the Public Health Group of The Faculty of Medical Sciences, Cave Hill Campus, The University of the West Indies. *Group Contacts: Ian Hambleton (analytics), Maddy Murphy (public health interventions), Kim Quimby (logistics planning), Natasha Sobers (surveillance).* For all our COVID-19 surveillance outputs, go to www.ianhambleton.com/covid19

Updated on: 17 Mar 2023 at 10:49:08

Aim of this briefing. We present the number of confirmed cases and deaths ¹ from COVID-19 infection in Antigua and Barbuda since the start of the outbreak, which we measure as the number of days since the first confirmed case. We report whether the case rate (per 100,000 people) is currently increasing or decreasing, and describe the current Antigua and Barbuda case load compared to the Antigua and Barbuda outbreak peak. For more on case rates, download the associated **country profile** For Antigua and Barbuda.

| Confirmed Events | Total | New (7 days) | Case Rate |
|------------------|-------|--------------|------------|
| Cases | 9,106 | 0 | 0% of peak |
| Deaths | 146 | 0 | |

These graphs show the absolute numbers of cases and deaths in Antigua and Barbuda since the start of the outbreak. They are the core information for assessing the extent of the COVID-19 burden over time.

Graph. New cases per week in Antigua and Barbuda as of 17 Mar 2023

Graph. New deaths per week in Antigua and Barbuda as of 17 Mar 2023
